

DM

answer
data

* Steps involved in Data Mining :-

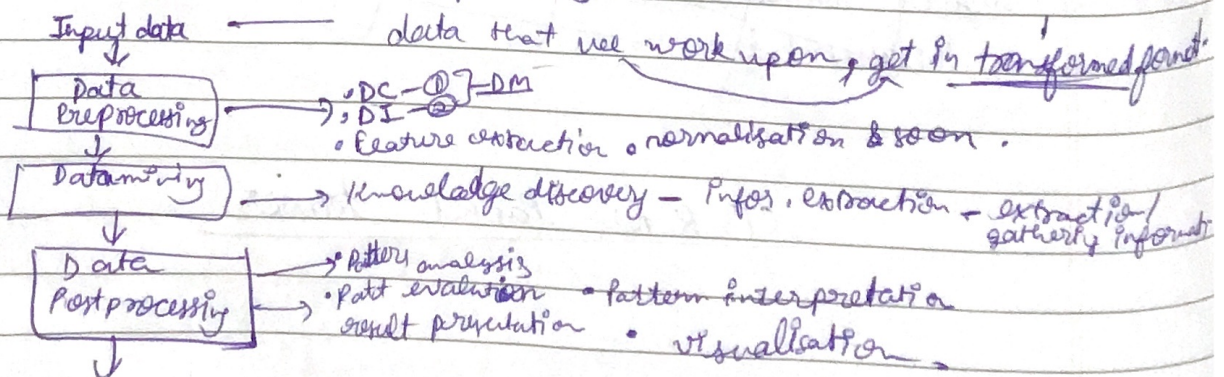

- ① Data cleaning :- Removing the noisy, unwanted, & extra stuff from data.
- ② Data integration :- ~~integrate~~ collection of one particular source from ^{multiple} different sources.
- ③ Warehousing of data :- storing the integrated data at one place for future use.
- ④ data selection :- targeted data at need of it for use later
- * ⑤ Knowledge discovery (data mining) :- knowledge discovery from all over the data is data mining (finding pattern)
- ⑥ Pattern analysis from ^{the} obtained ^{mining result} result :- analysis performed on the obtained pattern.
- ⑦ Presentation of the ^{data} ~~data~~ :- Presentation of the analysed data.
- ⑧ Storage of the ^{pattern} result in database :- storing the obtained ^{pattern} data in DB.

* Business Intelligence

- ① Data exploration :- Data mining from available data.
- ② decision making :- Results obtained from data mining helps in BM.
- ③ data visualisation :- Presenting data in visualised format.

* Steps involved in KDD process :-

unstructured - structured

Storing the results in the DB

stats, graph, chart
